Assignment Paper 2nd

Subject :- Education Psychology

SECTION-A

Que. what is education psychology? How education psychology has effected education process?

Ans:- Meaning:-

Education and psychology are two different branch of knowledge but they are closely related. There are heavy impact of psychology and on education. Education psychology explain method of teaching and learning. Through psychological research we can study the mental activity of an individual. Through psychological research of behaviour and the aim of education is to modify the behaviour to get device goal.

Definition:->

According to crow "Education psychology describe and explain the learning experience of an individual from birth to old age. Education psychology environment education psychology draws out a good deal of material from general psychology its has assumed its own position and own status.

1. Heredity and Environment:->

Proper education of child can be done only if teacher is well aware of the child's heredity and environment. According to Macleiver and Page, "All the qualities of life are in the heredity, all the vocational qualities depends on the environment."

2. Human Psychology :-

Body is the important part of the personality. So it is important to study the structure of the body for the success of education. Body and mind act and react upon.

3. Psychology of Teaching :-

In education Psychology of Teaching has occupied a very important place. A teacher is considered as a Gardner and the children are like flower.

4. Study of the Behaviours :-

Education Psychology is the science of the study of

behaviour. A child shows his attitude towards society through various activities.

5. Development of the character:-

The aim of Psychology is to study the character. The teacher should try to develop the ~~char~~ character of the students.

6. Paying attention to special attitude of the students:->

Every student has some special "intelligence" attitude. It is the responsibility of the teacher to keep the special attitude in the mind. This is possible through educational psychology.

7. Measurement:-

Every child has some special intelligence and capacities are measured through education psychology.

8. Study of individual Difference:->

All the students are not (each other) some students differ from each other, Physically as well as

psychologically. The teachers take advantage of their difference.

9. intelligence and maturity :-

After birth, a child starts reacting upon the environment. This reaction maturity from the above discussion. It is clear the educational psychology affected the educational process. It helps in developing personality and mental health. It helps developing personality good behaviour, its difference attitude and develop the character of the child.

The job of educational psychological has many side. All there process help to give shape to practical knowledge based on theoretical knowledge.

SECTION-B

Que. what is the influence of heredity on a child? Describe.

Ans: Meaning :-

It means all the characteristics which a individual from his parents. It

determine the structure and colour of skin, hair, height, features etc. The colour and features of child is mostly depend on his parents or other family member. If the colour of child's parents is dark then the complexion of child is also dark. If the parents have white colour then child will also have fair complexion. These effects are arising due to mixture of the blood of parents and sperm cell of the male which meet the egg cell of the female and then the child is conceived.

For example:-

~~The~~ The complexion of child is depend on the both the mother and the father. If father have dark complexion but the colour of child is fair it is because of fair gene. But if the colour of one gen is fair and other is dark but the colour of the child depend on the prominent gene. If the mother and father both have dark colour but child is fair because they carry dark gene from

their previous generation.

INFLUENCE OF THE HEREDITY ON THE CHILD:-

Human development can not be imagined without heredity and environment. Both the heredity and environment has great influence on child. For e.g, when the farmer decides to sow the wheat, he has need to make the seeds on the environment and heredity.

The status of child, youth and old man in the family in school and society is not the same. This differences effect his personality role, thinking and character. A child receives all these qualities through parents.

For Example:-

The farmer ploughs the field and sow the seeds in it. But the seeds which are sowed on the stone does not sprout, the other seeds sowed on the land sprout easily but if it is landed on the other hard land it sprouts difficulty. Water is also very important for the growth of the plant.

The same condition is forced out by human being which a child born, he has some

psychology and mental qualities like seed but these qualities does not development under all conditions. The environment play a great role in the development of child. Heredity influenced the child, if any members of the family have the bad habit of gambling, smoking, drinking or stealing the same quality are inherent in the child. The child's Personality is considerable influenced by the character and conduct of its parents.

Heredity contributes the delinquency of the child on the other hand proper atmosphere affection knowledge of child psychology good behaviour of parents develop the moral values and personality of the child. Both must be important for over all development of personality.

SECTION-C.
